Informatics (Bachelor, 3 years) is for those who enjoy using, and programming computers, from Web sites or databases to desktop programs, but don't like electronics or Scopes. In fact during the 3 years the tuition is about what's in the field of Computers and Software but without subjects about electronics, and associated equipment.

The advantages are that the students get a degree in just three years, the curriculum is only about using and programming computers, the school is conducted with teachers from a great and prestigious Technical University.

The students will acquire skills to solve the real-life problems by using computer programs, or by creating new ones. They will know a lot about understanding and using basic concepts of computer science, identifying and solving problems in Informatics, using dedicated software, design and maintenance of computer applications with more programming languages and environments, information management, human-computer interaction, operation and management of computers and computer networks. They are trained for teamwork, as well.

Many big IT Companies can't wait to hire our alumni. They will have good salaries and professional positions because they are more oriented towards practice.
